Annual crop

Currency Euro (EUR)
Date 24-11-2020

Land use **Rice / Rice paddy conventional practices, Côte d'Ivoire**

Description Conventional practices by smallholder farmers. Itinerant crop.

ANNUAL PRODUCTION

In tons per cultivated hectare per year .95 Tons

In case of multiple harvests per year, these were added up to get an average productivity per year and per hectare.

VALUE

In currency per ton 350.00 EUR

This corresponds to the local price for the raw produce, in the local market, unless specified differently in the comments section below. In case the raw produce is transformed locally, the price of the processed product may be used to better reflect its local value. Note that the estimated value in Euros may have changed with evolving exchanged rates since the creation date of this worksheet.

COSTS

Average costs of production excluding labour costs, per hectare per year 80.00 EUR

These are the non-labour costs supported by farmers, ranging from the seeds acquisition, land preparation to the harvest costs, including the management of the plantations in between. Costs related to the processing of the raw produce are only included if the price indicated above was that of the processed commodity.

LABOUR

Average days of work per hectare and per year to achieve the productivity above 102.55 Days

The majority of the workforce comes from family members Yes

TREES ON FARMS

Average number of trees on farmland per hectare 0.0 Trees

This is particularly relevant for shade-grown cultivation and agro-forestry systems

BIODIVERSITY

Relative biodiversity value estimate expressed in % of the biodiversity value found in local intact natural forests 10.0 %

SHIFTING CULTIVATION

Number of years the same area of land is cropped before putting the land to fallow and displacing the 5 Years

cultivation to another area

Number of years the land is left to fallow before being available again for cultivation 5 Years
