

# Land-use Planner

Engage in participatory land-use planning

Annual crop

Currency	Euro (EUR)
Date	27-11-2020
Land use	<b>Cassava / Cassava, South and Central, Cameroon</b>
Description	Small producers conventional practices, South and Central, Cameroon

## ANNUAL PRODUCTION

In tons per cultivated hectare per year	8.00	Tons
---	------	------

In case of multiple harvests per year, these were added up to get an average productivity per year and per hectare.

## VALUE

In currency per ton	100.00	EUR
---------------------	--------	-----

This corresponds to the local price for the raw produce, in the local market, unless specified differently in the comments section below. In case the raw produce is transformed locally, the price of the processed product may be used to better reflect its local value. Note that the estimated value in Euros may have changed with evolving exchanged rates since the creation date of this worksheet.

## COSTS

Average costs of production excluding labour costs, per hectare per year	.00	EUR
--	-----	-----

These are the non-labour costs supported by farmers, ranging from the seeds acquisition, land preparation to the harvest costs, including the management of the plantations in between. Costs related to the processing of the raw produce are only included if the price indicated above was that of the processed commodity.

## LABOUR

Average days of work per hectare and per year to achieve the productivity above	0.0	Days
---	-----	------

The majority of the workforce comes from family members

Yes

## TREES ON FARMS

Average number of trees on farmland per hectare	15.0	Trees
---	------	-------

This is particularly relevant for shade-grown cultivation and agro-forestry systems

## BIODIVERSITY

Relative biodiversity value estimate expressed in % of the biodiversity value found in local intact natural forests	15.0	%
---	------	---

## OTHER INFORMATION

Cassava or Maniok practices Cameroon: 65% claims to grow maniok Average price: 111 CFA/kg = 0.17 euro/kg Average yield/family: 732 kg/yr family Source: Stan Blomme, field work, 2018
